

Milind Chokshi
Level: Cloud Applications/Engineering Architect
Email: Chokshi_milind@bah.com
Cell: (757) 763-0143

Clearance: Clearance Eligible, Public Trust
Residence: Virginia
Willing to relocate: Yes
% Willing to Travel: 100%

EXPERIENCE SUMMARY

I am seasoned IT leader with many years of experience in enterprise-scale digital transformation, specializing in cloud computing, data engineering, distributed systems, and application architecture. I have a proven track record in implementing advanced solutions such as Microsoft Azure Platform using Fabric (Databricks-based Spark and Delta Lake platforms), Azure Functions, Power BI integration, DevOps frameworks, and CI/CD pipelines using automation and scalability. My expertise spans architecting cloud-native solutions, designing application using governance, and security while focusing privacy, and compliance. I excel at aligning technology with business goals, mentoring teams, and fostering agile delivery through modern DataOps and MIOps practices.

COMPETENCIES

• Cloud Architecture & Modernization (7 yrs)	• Cloud Solution Engineer (5 yrs)
• Database Design and Development (5 yrs)	• Cloud/Systems Integration (10 yrs)
• Data Governance (4 yrs)	• DevOps/DataOps Engineering (7 yrs)
• Database Administration (5 yrs)	• Agile Development (10 yrs)
• Portal Development (5 yrs)	• Web Software Development (5 yrs)

WHITE PAPERS/CERTIFICATIONS

- AWS Certified Cloud Practitioner (Expected Feb 26)
- Building Resilient Streaming Systems
- Big Data and Machine Learning Fundamentals
- Complete Guide to Databricks for Data Engineering
- Leveraging Unstructured Data with Cloud

SUMMARY OF SKILLS, TOOLS, AND TECHNOLOGIES:

Cloud Platform: Microsoft Azure, Google, Ignition (SCADA), Amazon Web Service (AWS)

Cloud Data Platform: Microsoft Fabric (Databricks related Spark//Delta Lake), Azure Data Factory

CI/CD Tools: Jenkins, Azure DevOps, Kubernetes

Data Governance: Manta, Brigid, Erwin Data Intelligence, Erwin Data Quality

Code Management: Enterprise Github, Github.com, SharePoint

Planning Tools: JIRA, Version One

Statistical Tools and Language: R-Studio, RS Connect Server, Shiny Applications

Visualization Tool: Power BI

Database Knowledge: ORACLE with PL/SQL programming, Microsoft Access, SQL Server

Programming Languages: Python, R

Operating System: Windows, Linux

EXPERIENCE DETAILS

Senior Data Operation Manager/Architect, PRA Group Inc, VA

2017-2025

- Designed modern cloud native architectures to improve stability and scalability for enterprise systems
- Led end-to-end modernization efforts for large-scale enterprise systems, introducing modern frameworks
- Implemented data integration, movement, transformation, Lakehouse and warehouse architectures, notebook-based development, role/group-based access controls, data pipeline creation, deployment pipelines, Git integration, configuration, and optimization
- Designed and architected data and application products for both internal and external business users, including technical teams such as Application developer, BI developers, and data engineers/scientists
- Worked with event-driven and trigger-based data services, as well as batch and stream replication systems
- Established a Data Governance program to enhance data lineage, dictionary, business glossary, quality, and cataloging for both transitional and restful data
- Architected and deployed secure, scalable cloud solutions ensuring compliance with governance standards

- Delivered enterprise-grade applications using OOP applications and cloud-native architectures.
- Improved delivery pipelines, increasing deployment velocity and system reliability for cloud applications
- Streamlined data representation and transformation using GitHub and Jenkins CI/CD pipelines, delivering Power BI and R-based reports for data visualization
- Led the development, maintenance, and deployment of machine learning models using Azure Machine Learning Studio across development, testing, and production environments
- Utilized containerization and orchestration technologies, applying DevOps, DataOps, and MLOps principles for scalable and efficient operations

Significant Achievements (Approx project cost \$5 million):

Strategic and hands-on leader with deep expertise in Azure, and modern data engineering technologies. Spearheaded enterprise-scale data migration projects (50+ TB) from on-prem to cloud, architecting resilient Lakehouse and warehouse ecosystems with 20% cost savings

IT Product Lead/Manager, TE Connectivity, Virginia

2015-2017

- Operationalize cross-platform industrial application platform used for SCADA and MES using OOP methods
- Connects disparate field devices and databases using OPC UA, MQTT, and SQL to enable real-time data visualization, alarming, and control using Python/Java based tools
- Validate SQL data testing and perform database performance improvement
- Coordinated vendors to upgrade current systems, purchase equipment, and maintain existing solutions.
- Implemented physical infrastructure from the database, network, and software installation
- Built data warehouse with business intelligence to create reports, charts, and data analysis in SQL Server
- Worked with Statement of Work (SOW), Master Service Agreement (MSA), and Project Charter

Significant Achievements (Approx project cost \$20 million):

Implemented the complete database and IT infrastructure of around \$1.2 million and helped with successful project execution to eliminate the manual data collection, storage and administration, and analysis phases

Senior Database System Analyst, ODU, Virginia

2011- 2015

- Designed and worked on Oracle schemas, table partitions, materialized views and indexes
- Corrected and compiled code into test, pre-production, and production environment
- Administered Oracle Database Administrator tasks such as RMAN backup and restoration, monitoring, users and role management, performance improvement, and cloning
- Supported and performed the database installation, implementation deployment, upgrades, and maintenance of Oracle based ERP systems
- Developed and configured the Oracle workflow application related to intra-department request flows

Portal Administrator/Web Developer, ODU, Virginia

2001-2011

- Guided and managed portal team members for Java based web-portal technical implementation and manage coordination among various departments such as network, database administrator, Banner Student application, security, Unix and Windows server, and LDAP administrator
- Created applications using servlets, JavaServer Pages, and Java-based technologies
- Developed websites for various educational departments, organization, and institutes within the University (<http://www.odu.edu>)

EDUCATION

MS - Computer Simulation, and MBA, Old Dominion University

BS - Electrical Engineering, BVM Engineering College, SP University
