

Milind Chokshi
Level: Data Engineer/Operation Lead
Email: Chokshi_milind@bah.com
Cell: (757) 763-0143

Clearance: Clearance Eligible
Residence: Virginia
Willing to relocate: Yes
% Willing to Travel: 100%

EXPERIENCE SUMMARY

I am seasoned IT leader with many years of experience in enterprise-scale digital transformation, specializing in cloud computing, data engineering, and application architecture. I have an extensive experience designing, developing, and optimizing scalable data platforms, ETL/ELT pipelines, and Lakehouse architectures such as Microsoft Azure Fabric (Databricks-based Spark and Delta Lake platforms), Power BI integration, and DataOps frameworks consuming the real-time data acquisition system with an emphasis on automation and scalability. My expertise spans architecting cloud-native solutions and driving data governance initiatives using tools like Manta, BigID, and Erwin for lineage, privacy, and compliance. I excel at aligning technology with business goals, mentoring teams, and fostering agile delivery through modern DevOps practices.

COMPETENCIES

• Data Engineer/Architect (7 yrs)	• Cloud Solution Engineer (3 yrs)
• Database Design and Development (10 yrs)	• Cloud/Systems Integration (10 yrs)
• Data Governance (4 yrs)	• Data Integration and Analyst (5 yrs)
• Database Administration (5 yrs)	• Agile Development (10 yrs)
• Portal Development (5 yrs)	• Web Software Development (5 yrs)

WHITE PAPERS/CERTIFICATIONS:

- AWS Certified Cloud Practitioner (2026)
- Building Resilient Streaming Systems
- Big Data and Machine Learning Fundamentals
- Complete Guide to Databricks for Data Engineering
- Leveraging Unstructured Data with Cloud
- AI enabled software engineering (Aug 26)

SUMMARY OF SKILLS, TOOLS, AND TECHNOLOGIES:

Cloud Platform: Microsoft Azure, Google, Ignition (SCADA), Amazon Web Service (AWS)

Cloud Data Platform: Microsoft Fabric (Databricks related Spark//Delta Lake), Azure Data Factory

CI/CD Tools: Jenkins, Azure DevOps, Kubernetes

Data Governance: Manta, BrigiD, Erwin Data Intelligence, Erwin Data Quality

Code Management: Enterprise Github, Github.com, SharePoint

Planning Tools: JIRA, Version One

Statistical Tools and Language: R-Studio, RS Connect Server, Shiny Applications

Visualization Tool: Power BI

Database Knowledge: ORACLE with PL/SQL programming, Microsoft Access, SQL Server

Programming Languages: Python, R

Operating System: Windows, Linux

EXPERIENCE DETAILS

Data/Cloud Engineer, Booz Allen Hamilton, VA

Present

- Assists in the deployment of data infrastructure such as cloud migration, data lakes, data mesh, and data fabric concepts; advises data teams on optimal approaches to data infrastructure to improve performance of analytics, dashboards, and decision-making
- Creates software and code for retrieving, parsing and processing structured and unstructured data
- Defines and builds scalable ETL/ELT workflows for reporting and analytics; supports project team to scale, monitor and operate data platforms for very high availability and performance

Senior Data Operation Engineering Manager/Architect, PRA Group Inc, VA

2017-2025

- Implemented data integration, movement, transformation, Lakehouse and warehouse architectures, notebook-based development, role/group-based access controls, data pipeline creation, deployment pipelines, Git integration, configuration, and optimization

- Designed and architected data products to ensure ease of access for both internal and external business users, including technical teams such as BI developers, data engineers/analysts/scientists, and ML engineers
- Developed conceptual, logical, and physical data modeling with best practices for DataMart/reporting
- Created and designed normalized OLTP schemas and dimensional OLAP/star-schema models
- Worked with event-driven and trigger-based data services, as well as batch and stream replication systems
- Established a Data Governance program to enhance data lineage, dictionary, business glossary, quality, and cataloging for both transitional and restful data
- Developed Azure PySpark/Spark SQL notebook-based data pipelines to process structured and unstructured data for Medallion Architecture within the One Lake/ADLS Gen2 cloud environment
- Streamlined data representation and transformation using GitHub and Jenkins CI/CD pipelines
- Administered and implemented GitHub integration for repository versioning across multiple organizations, including project management, issue tracking, branch organization, and wiki documentation
- Led the development, maintenance, and deployment of machine learning models using Machine Learning Studio across development, testing, and production environments
- Utilized containerization and orchestration technologies, applying DevOps, DataOps, and MLOps principles for scalable and efficient operations

Significant Achievements (Approx project cost \$5 million):

Strategic and hands-on leader with deep expertise in Azure, and modern data engineering technologies. Spearheaded enterprise-scale data migration projects (50+ TB) from on-prem to cloud, architecting resilient Lakehouse and warehouse ecosystems with 20% cost savings

IT Product Lead/Manager, TE Connectivity, VA

2015-2017

- Operationalize cross-platform industrial application platform used for SCADA and MES
- Connects disparate field devices and databases using OPC UA, MQTT, and SQL to enable real-time data visualization, alarming, and control using Python based tools
- Validate SQL data testing and perform database performance improvement
- Implemented physical infrastructure from the database, network, and software installation
- Built data warehouse with business intelligence to create reports, charts, and data analysis in SQL Server
- Worked with Statement of Work (SOW), Master Service Agreement (MSA), and Project Charter

Significant Achievements (Approx project cost \$20 million):

Implemented the complete database and IT infrastructure of around \$1.2 million and helped with successful project execution to eliminate the manual data collection, storage and administration, and analysis phases

Senior Database System Analyst, Old Dominion University, VA

2011- 2015

- Designed and worked on Oracle schemas, table partitions, materialized views and indexes
- Corrected and compiled code into test, pre-production, and production environment
- Supported and performed the database installation, implementation deployment, upgrades, and maintenance of Oracle based ERP systems
- Developed and configured the Oracle workflow application related to intra-department request flows

Portal Administrator/Developer, Old Dominion University, VA

2001-2011

- Guided and managed portal team members for Java based web-portal technical implementation and manage coordination among various departments such as network, database administrator, Banner Student application, security, Unix and Windows server with scripting, and LDAP administrator
- Developed websites for various educational departments, organization, and institutes within the University (<http://www.odu.edu>) and created applications using Java-based technologies

EDUCATION

BS - Electrical Engineering

MS – Electrical Engineering (Computer Simulation major)
