Subject: Application for Data Engineering Team Lead (Job ID: R0234960)

Dear Jim,

I am excited to apply for the Data Engineering Team Lead position. With over a decade of experience building production-grade data pipelines and more than five years leading data engineering teams, I bring the technical leadership and hands-on expertise you are seeking.

My background includes building and optimizing distributed data systems using Spark, Databricks, and PySpark; architecting Lakehouse environments; and designing schemas and queries for high-performance analytics. I also have extensive experience developing batch and streaming pipelines using cloud technologies and integrating both structured and unstructured data.

Additionally, my expertise in cloud cost optimization and implementing governance frameworks aligns well with your project requirements. Beyond technical capability, I take pride in my ability to lead cross-functional teams, foster collaboration, and deliver solutions that exceed client expectations.

I am eager to bring my skills and passion for emerging technologies to help drive transformation through modern, secure, and scalable data solutions. Thank you for considering my application. I look forward to the opportunity to discuss how my experience and vision align with your team's goals.

Sincerely,
Milind Chokshi
