Subject: Application for Data Engineer, Lead (R0245134)

Dear Kemo,

I am writing to express my interest in the Data Engineer, Lead position at Booz Allen Hamilton. With extensive hands-on experience designing scalable data platforms, developing mission-critical ETL/ELT pipelines, and implementing Lakehouse architectures using modern medallion patterns, I am excited about the opportunity to contribute to Booz Allen's mission-driven data initiatives. The role's focus on solving meaningful challenges—ranging from analytics optimization to supporting national-level missions—strongly resonates with my background and professional goals.

As a Data Engineer, I have architected and deployed data pipelines using Analytics, and Azure Fabric (Databricks)—core technologies central to this opportunity I have built resilient ingestion frameworks sourcing from REST APIs, event streams, enterprise databases. My work includes implementing high-quality data models, optimizing Spark-based transformations, developing custom data-quality validation scripts, and establishing observability.

I have a strong track record of guiding junior engineers, establishing standards, and driving best practices across multi-disciplinary teams, as highlighted in your expectations for this role. I welcome the opportunity to bring my experience to a team that leverages data for impact and drives meaningful change across industries and government missions.

Thank you for your time and consideration. I look forward to the possibility of contributing to your team.

Sincerely,

Milind Chokshi
