Hiring Manager

Jessenia Gonzalez

Subject: Application for Data Engineer, Lead Position (Req Id: R0231790)

Dear Jessenia,

I am excited to apply for the Data Engineer, Lead position at Booz Allen Hamilton. With over 10 years of experience in data engineering, architecture, and pipeline development, I bring a proven ability to design and implement scalable solutions that transform complex data into actionable insights.

In my previous role as a Data Operation Engineering Manager, I have successfully managed teams of engineers, guiding them through the development and deployment of robust data pipelines and platforms. My experience includes:

- Designing and implementing Python-based data pipelines for structured and unstructured data, ensuring efficient retrieval, parsing, and processing.
- Building scalable ETL/ELT workflows to support advanced analytics and reporting.
- Leveraging cloud platforms and distributed computing tools such as Spark/Databricks, to optimize data processing.
- Applying medallion architecture principles from Bronze to Gold transformation to structure data lakes for improved accessibility and governance.

Additionally, I have hands-on experience with database tuning and access control. My background in Agile practices and data warehousing technologies further strengthens my ability to deliver innovative solutions in dynamic environments.

I would welcome the opportunity to discuss how my skills and experience can contribute to Booz Allen's success. Thank you for considering my application. I look forward to the possibility of joining your team and helping drive impactful solutions.

Sincerely,

Milind Chokshi
