Subject: Application for **Data Lead, Senior Manager** R0236344

Dear Patricia,

I am excited to apply for the **Data Lead, Senior Manager** role (R0236344). With over a decade of experience in enterprise data architecture, governance, complex ERP data migrations, and Contract Lifecycle Management (CLM) processes, I bring the leadership and technical depth needed to drive the end-to-end data strategy for this program. Working in the financial industry for a long time has exposed me to internal working of data and application comprehensively.

I have led data architecture and migration initiatives that required defining enterprise data strategies, building governance frameworks, translating business processes into scalable data models, and aligning data structures with system configurations—core responsibilities of this role. I have also managed large-scale data migrations, developing runbooks, transformation rules, and validation processes while coordinating with system integrators to ensure accurate and complete data ingestion into ERP platforms.

My experience establishing master data domains, implementing data quality standards, and leading cleansing efforts positions me well to manage the program's data quality and governance requirements. I also bring strong cross-functional collaboration skills, having worked closely with Enterprise Architecture, Integration, QA, and business process teams to ensure data supports reporting, analytics, and AI-enabled insights.

Thank you for your time and consideration.

Sincerely,

Milind Chokshi
