Subject: Application for Cloud Engineer (Lead/Level 3)

Dear Carl/Jason,

I am excited to apply for the Cloud Engineer role supporting the Federal Reserve System Board of Governors Cloud platform initiative. I have more than 10 years of IT experience, including 8+ years delivering secure, mission-critical Cloud infrastructure in regulated environments.

My background includes designing and operating cloud services such as computer, storage, monitoring, and IAM policies with strong hands-on experience in Github and CI/CD pipelines. I have led cloud platform deployments that improved reliability, reduced provisioning time, and strengthened configuration consistency across environments. I also automate operational tasks with Bash and Python and support incident, change, and service management processes aligned with enterprise governance expectations.

I work effectively in Agile teams, troubleshoot complex issues independently, and maintain clear technical documentation to support auditability, operational continuity, and knowledge transfer. I am available for 100% remote delivery, understand the 6–8 week clearance timeline, and am fully prepared to obtain and maintain the required Public Trust or Suitability/Fitness determination.

Thank you for your consideration. I would welcome the opportunity to discuss how my federal-focused cloud engineering experience can support successful platform build and long-term operations.

Sincerely,

Milind Chokshi
