

Important Information

You are using a training account with limited access to Amazon Bedrock. Due to the service quotas set for Requests per Minute (RPM), Tokens per Minute (TPM) and Tokens per Day (TPD) , you may encounter throttling issues. To mitigate these issues:

1. Execute code blocks one at a time.
2. If you receive an error, wait a few seconds before retrying.
3. Avoid running multiple operations concurrently.
4. If throttling persists, wait 2 minutes before running any code that interacts

with
Bedrock.

5. If the problem continues after waiting, you may need to end the lab and start again.

We understand this is not ideal and are working hard to implement a permanent solution. Following these steps will help ensure a smoother experience as you explore Amazon Bedrock's capabilities. In the interim, please provide the details of any problems you encounter using the [AWS Training and Certification Contact Form](#).

Optimizing Slogan Generation

Lab overview

You are a Marketing Executive whose client is a coffee corporation that promotes ecology as a key selling point. You have been asked to create campaign slogans and a complete Advertising Pitch Document for your coffee shop client.

In this lab, you use Amazon Bedrock and Amazon Nova Pro to generate advertising slogans for a marketing agency. You'll start with basic prompts and progressively refine them using prompt engineering techniques to create more effective and tailored slogans.

Objectives

By the end of this lab, you should be able to do the following:

- Utilize basic Generative AI prompting techniques to generate a Slogan.
- Improve the prompt by providing more context about the client.
- Specify the tone and style for the Slogan.
- Use the few-shot prompting technique.
- Optimize the prompt with specific instructions.
- Create an advertisement pitch document.

Icon key

Various icons are used throughout this lab to call attention to different types of instructions and notes. The following list explains the purpose for each icon:

- **Expected output:** A sample output that you can use to verify the output of a command or edited file.
- **Note:** A hint, tip, or important guidance.
- **Task complete:** A conclusion or summary point in the lab.
- **Warning:** An action that is irreversible and could potentially impact the failure of a command or process (including warnings about configurations that cannot be changed after they are made).

Start lab

1. To launch the lab, at the top of the page, choose **Start Lab**.

Caution: You must wait for the provisioned AWS services to be ready

before you can continue.

2. To open the lab,
choose **Open Console**  .

You are automatically signed in to the AWS Management Console in a new web browser tab.

Warning: Do not change the **Region** unless instructed.

Common sign-in errors

Error: Choosing Start Lab has no effect

In some cases, certain pop-up or script blocker web browser extensions might prevent the **Start Lab** button from working as intended. If you experience an issue starting the lab:

- Add the lab domain name to your pop-up or script blocker's allow list or turn it off.
- Refresh the page and try again.

AWS services used in this lab

Amazon Bedrock

Amazon Bedrock is a fully managed service that offers a choice of high-performing foundation models (FMs) from leading AI companies through a single API. It provides a broad set of capabilities to build generative AI applications with security, privacy, and responsible AI.

Task 1: Creating and refining the Slogan

In this task, you create a basic slogan for the coffee shop and iteratively refine it.

Task 1.1: Review model used in this lab (optional)

This lab uses the Amazon Nova Pro model.

3. On the AWS Management Console, in the search box, search for and choose

4. In the Amazon Bedrock console, expand the left side panel if it is not already visible, then choose **Model catalog**.

5. Under **Providers**, select **Amazon**.

6. In the search box, type

card and learn more about its capabilities.

Task 1.2: Basic Slogan Generation

In the Amazon Bedrock Playground, run a prompt to create basic slogans.

7. In the Amazon Bedrock console under **Test** choose **Playground**.

8. Choose **Select model**.

9. Select **Amazon** and then choose the **Nova Pro**.

Caution: Ensure you select **Nova Pro 1.0** specifically. Selecting a different model will result in a permissions error.

10. Choose **Apply**.

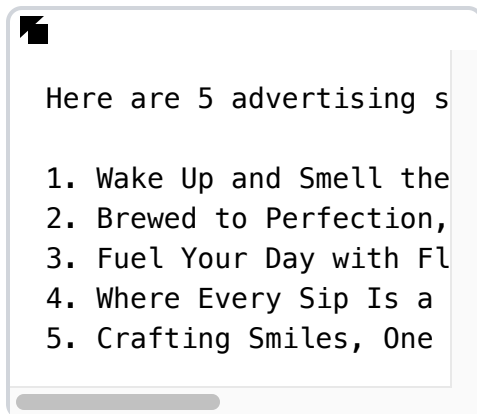

11. For *Mode*, choose **Single Prompt** for text.

12. In the **Prompt** dialog, paste in the following:

13. Choose **Run**.

Expected Output: The responses vary, but it may include 5 slogans similar to:

- **Note:** Since these exercises are using Single Prompt, for each prompt, you want to clear the text area from any previous question/answer to focus the model to reply based on the current question only. To clear the text-area, click

the **Clear** button (broom/brush icon) on the top-right of the text-area.

Task 1.3: Testing Inference parameters

To the left of the model title, on top is the text-area, you see a pane for Inference parameters named **Configurations**. In this **Configurations** pane, there are settings that you can adjust to vary the output. The *Temperature* and *Top P* parameters control how creative or how deterministic the model reply is. By default, Temperature and Top P sliders are all the way to the right, yielding more creative slogans.

Note: If the **Configurations** pane is not visible, click on the icon under the **Mode** selection.

14. Generate more creative slogans. Try the same prompt as the previous task a couple more times with the default **Temperature** and **Top P**, with the sliders all the way to the right.

Note: Notice that the model output may give you slogans that are different or more creative/unique each run.

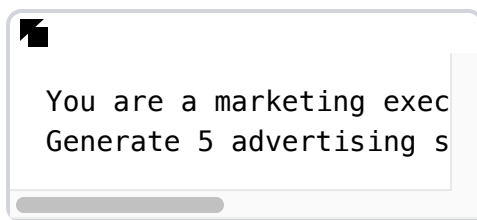

15. Adjust the **Temperature** and **Top P** sliders all the way to the left and rerun the same prompt.

Note: Notice the model output. Running the same prompt a few times, may give you slogans that are very similar between runs.

Task 1.4: Adjusting the LLM Persona to Influence the Output

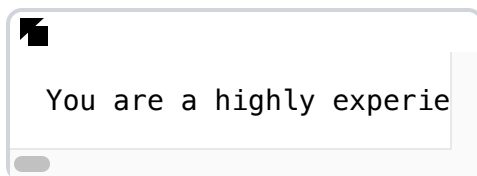

In a prompt you can ask the prompt to adopt a specific personality, character or role to influence the tone and style of the output.

16. Run the following prompt defining a specific persona to generate slogans:

- **Note:** Notice the slogans created by the model with this persona.

17. Run the following edited prompt to specify a different persona:

- **Note:** The slogans created by this persona may look more crafted or thoughtful than the previous ones.
- **Note:** When prompting an LLM with a “persona” and specifying that they are “experienced,” you are essentially providing additional context to guide the model towards generating responses that align with the knowledge and perspective of someone with significant experience in that role. This may lead to more nuanced and

informed answers tailored to the specific situation.

Task 1.5: Adding more context to the prompts

You can improve the prompt by providing more context about the client.

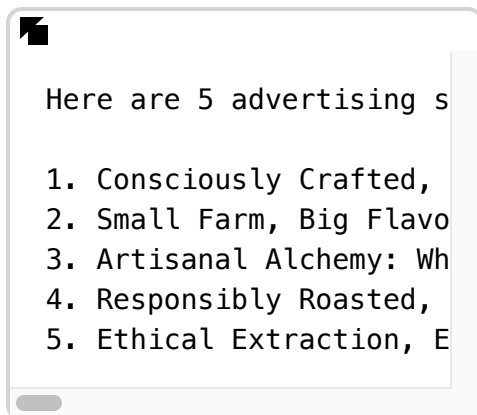

18. Clear the previous text and response from the text-area.
19. Modify the prompt as follows or copy the edited prompt into the text field.

Generate 5 advertising s

20. Choose **Run**.

Expected Output: The responses vary, but it may be similar to:

Here are 5 advertising s

1. Consciously Crafted,
2. Small Farm, Big Flavo
3. Artisanal Alchemy: Wh
4. Responsibly Roasted,
5. Ethical Extraction, E

Task 1.6: Specifying Tone and Style

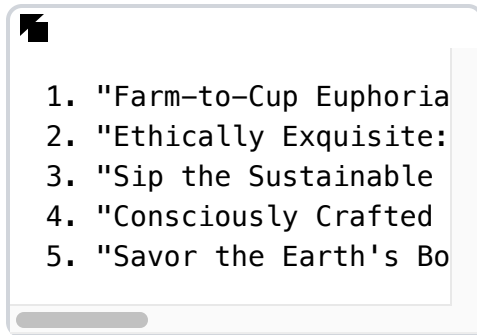

Further refine the prompt by specifying the desired tone and style.

21. Update your prompt as follows:

22. Choose **Run**.

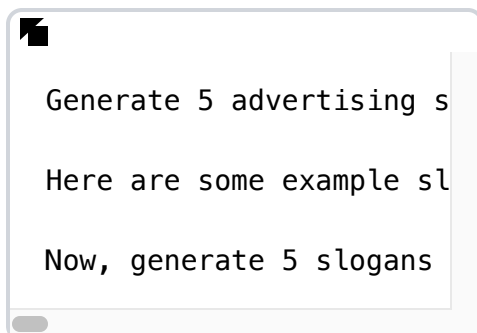

Expected Output: The responses vary, but it may be similar to:

Task 1.7: Using the Few-Shot Technique

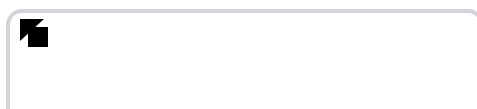

Employ the few-shot technique to guide the model with examples.

23. Update your prompt as follows:

24. Choose **Run**.

Expected Output: The responses vary, but it may be similar to:

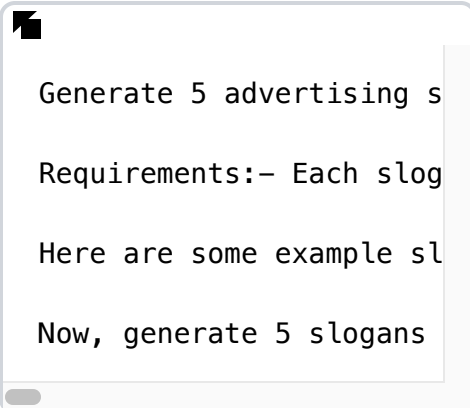

1. "Where Every Bean Tel
2. "Artisanal Craft, Eth
3. "From Farm to Cup, a
4. "Savor the Flavor, Em
5. "The Perfect Brew for

Task 1.8: Optimizing with Specific Instructions

Further refine the prompt by adding specific instructions for slogan structure and keywords.

25. Update your prompt as follows:

Generate 5 advertising s

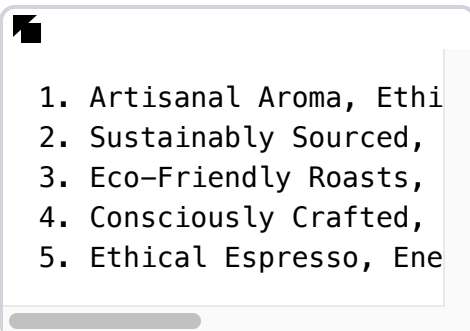

Requirements:- Each slog

Here are some example sl

Now, generate 5 slogans

26. Choose **Run**.

Expected Output: The responses vary, but it may be similar to:

1. Artisanal Aroma, Ethi
2. Sustainably Sourced,
3. Eco-Friendly Roasts,
4. Consciously Crafted,
5. Ethical Espresso, Ene

Task complete: You used different prompt techniques iteratively to successfully create

and refine a prompt slogan.

Task 2: Creating an Advertising Pitch Document

In this final exercise, you create an advertising pitch document using the slogans generated in the previous steps. This document showcases the slogans and provides a brief explanation for each, demonstrating how they align with the client's brand and target audience. For the output, use Markdown-style text to create a more sophisticated output with different font sizes. You can ask the LLM to create the output in Markdown format.

Note: For more information regarding Markdown, you can refer to the [Markdown Guide Basic Syntax](#) documentation page.

Task 2.1: Create a prompt for the final Advertising Pitch Document

27. In the Chat/text playground, under **Mode** choose **Chat** for text.

28. Choose **Select model** .

29. In the **Select** model pop-up window:

- For **Categories**, choose Amazon.
- For **Models**, choose **Nova Pro**.

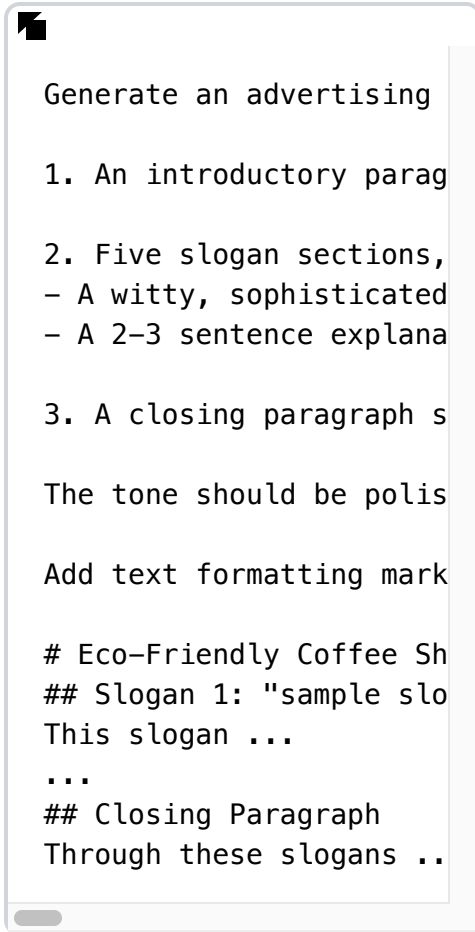

Caution: Ensure you select **Nova Pro 1.0** specifically. Selecting a

different model will result in a permissions error.

- For **Inference**, ensure **On-demand** is selected.

30. Choose **Apply** .

31. Create a prompt for the Final Advertising Document as follows:

A screenshot of a text input field, likely from a web application, showing a prompt for generating an advertising document. The text is as follows:

```
Generate an advertising  
  
1. An introductory parag  
  
2. Five slogan sections,  
- A witty, sophisticated  
- A 2-3 sentence explana  
  
3. A closing paragraph s  
  
The tone should be polis  
  
Add text formatting mark  
  
# Eco-Friendly Coffee Sh  
## Slogan 1: "sample slo  
This slogan ...  
...  
## Closing Paragraph  
Through these slogans ..
```

32. Choose **Run** .

- **Expected Output:** The responses vary, but it should contain the following sections:
 - An introductory paragraph.
 - Five slogan sections, each containing the slogan and the explanation for the slogan.
 - A closing paragraph.

The Final document should be formatted as Markdown.

Task 2.2: Save the final Advertising Pitch Document as Markdown

33. Once you have completed your advertising pitch document, copy and paste it into your favorite text editor.

- **Note:** To copy the markdown, select the copy button on the top-right of the response, which is next to the *Regenerate response* button. This is in the same line as the **Eco-Friendly Coffee Shop: Advertising Pitch** title.

Note: Notice that there are two copy buttons. The one to be used to copy the markdown text is the one inside the Output text area to the right of the title.

34. From your text editor, save the document as a markdown file named:

 `eco_coffee_pitch_<your-name-here>.md`

Note: Optionally, you can send the markdown file to your instructor for review or additional suggestions.

Remember to proofread your work and ensure that each slogan explanation effectively communicates the brand's values and appeals to the target audience of environmentally conscious millennials.

Task complete: You used prompt techniques iteratively successfully create and refine an Advertising Pitch Document.

Conclusion

You successfully did the following:

- Utilized basic Generative AI prompting techniques to generate a Slogan.
- Improved the prompt by providing more context about the client.
- Specified tone and style for the Slogan.
- Used the few-shot prompting technique.
- Optimized the prompt with specific instructions.
- Created an Advertisement pitch document.

Note: These skills can be applied to a wide range of content generation tasks beyond slogan creation.
